

HelloJohn,

The technological challenges of working at your company caught my eye, but I am also drawn to your mission. I am recent bootcamp grad with a passion for JavaScript and writing sustainable code. I'm interested in working as a Hiring Manager for Valve. In particular I am drawn to your company size and core beliefs .

I am a full Stack engineer with an eye towards rapid development and a knack for flexible problem solving. I love to code, and bring ideas to life. Through my previous positions I have developed finely honed communication skills, which I believe cannot be overstated in a development position. I have also spent a great deal of time code pairing while at Grace Hopper Academy.

My code speaks for itself, check out my github. <https://github.com/MichJadams>.
Technologies touched: JavaScript, Node.js, React.js, SQL, CSS, HTML, webpack, babble, PostgreSQL, sequelize, Now, Git, Python and a little bit of Rust and Webassembly.

I hope to hear from you soon,
Michaela Adams
